

DTOPLIGHT[®]

b-m
BUSCH + MÜLLER

www.bumm.de

Part. No. 328AL

Assembly:

Assemble the 'DToplight' with the bolts to the luggage carrier and fix it with the washers and nuts. This will create a mass (earth) contact. If a mass (earth) contact is not possible due to plastic parts interrupting the electrical circuit you can either connect a wire from the marked bolt on the rear light to the luggage carrier stay or connect a mass (earth) cable to the marked plug or screw contact. Connect the current cable to the corresponding marked plug or screw contact.

The integral overvoltage protection from increased current due to headlight bulb failure works for a short time (appr. 3-5 minutes) in order to avoid damage of the electronics. A blown headlight bulb must be replaced immediately for your safety!

The integral reflector of the 'DToplight' must be vertically adjusted with the road.

For further questions please do not hesitate to contact us.

Please refer to this instruction leaflet in order to apply further information. Thank you !!
